

# Why Can't Our Energy Be Free?

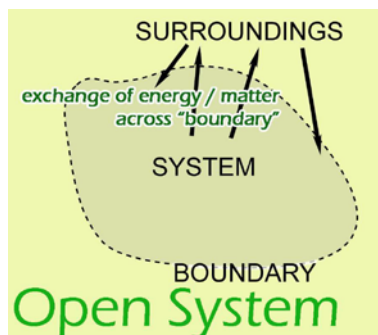

*"Ere many generations pass, our machinery will be driven by a power obtainable at any point of the universe. It is a mere question of time when men will succeed in attaching their machinery to the very wheelwork of nature."* **Nikola Tesla**

Many conventionally trained physicists will tell you that free energy generation is not possible because it violates the Laws of Thermodynamics. Specifically, they claim that the 2nd Law of Thermodynamics requires that within a "closed system" energy cannot be created or destroyed, meaning that you cannot access any additional energy from a "closed system" than you input into it.

All the energy you add to the system will be "transformed" within the "closed system" to other forms of energy (including "loss heat"), however the TOTAL ENERGY within the system will always remain the same.

However, ALL Functional "Free Energy Generation Devices" Work Through the Principle of "OPEN SYSTEMS". "Open System Thermodynamics" is a field uncovered by the great scientist Ilya Prigogine, who was awarded the Nobel Prize in Physics for his "discovery" of Open System Thermodynamics. "Open Systems" Interact With Their Surroundings... Allowing Energy Exchange + OUTSIDE INPUT! This is the secret to Sustainable Energy. Open Systems can be designed to harness energy from the surrounding environment, leading to an "overunity" result (more output than input).

**Green Energy Open Systems include:** Solar, Wind, Water (Wave Power, Hydroelectric, Etc.), and Organic Matter for Fuel

**Exotic Energy Solutions include:** Radiant Electrostatic Energy Harnessing, Magnet Motors, Cold Fusion, Solid State Chemical/Electromagnetic Systems, Nitinol Engines, and Tapping "Zero Point" Energy (The **AETHER!**)

"Zero-point energy" also called "vacuum energy" refers to the quantum physics property of empty space having a very large amount of mysterious energy. The Casimir effect, the Lamb shift, and quantum spontaneous emission are examples of quantum physics demonstrations of this energy.

One of the greatest unsolved mysteries of science today is based around how the known zero point energy existing is so much greater than Einstein's theoretical predictions for energy in the universe, vastly larger amounts than even the mysterious dark matter & dark energy that physicists believe most the universe is made of.

The Wikipedia article for "Cosmological constant problem" states that "The discrepancy [between the observed and theorized energy in the universe] is as high as 120 orders of magnitude [1 with 120 zeroes after it], a state of affairs described by physicists as "the largest discrepancy between theory and experiment in all of science" and "the worst theoretical prediction in the history of physics."

In short, this means that there is so much energy available in the universe that science cannot even begin to explain it, leaving scientists rightfully embarrassed at what they call the "vacuum catastrophe", meaning their inability to explain the energy of the vacuum existing even in empty space.

The universe is still so very mysterious that we must be sure to keep asking questions about everything and never assume we know anything as truth just because it was in a school textbook or on the TV.

# Insiders Reveal Suppressed Free Energy Technologies & UFO Connection

"It is my scientific opinion that free energy, a technology which has been formerly suppressed and denied, is almost here and could soon become available to all of us."

**-Dr. Brian O'Leary, NASA Astronaut**

"Probably 50 inventors have invented [virtually cost-free energy systems]. If we use these systems, we can clean up this biosphere. But the entire structure of science, industry, and the patent office are against you... The more powerful the agency, the more they resort not only to legal, but to extra-legal means to suppress their competition."

**Colonel Thomas E. Bearden, US Army, Ph.D. in Nuclear Engineering,**

"Zero-point energy represents about 40-50 megawatts of power per cubic inch of space. That's a lot of power. If you could tap it at will, then no one would have to sell gasoline or oil anymore ... There are people who have been experimenting with zero-point energy, or who tried to tap zero-point energy for years. Every once-in-a-while, someone will do it accidentally. They'll call it cold fusion, but I don't think it's cold fusion; I just think it's a zero-point energy tap."

**Paul Czysz, PhD, Professor of Aeronautical Engineering, McDonnell-Douglas**

"We already have the means to travel among the stars, but these technologies are locked up in black projects and it would take an Act of God to ever get them out to benefit humanity... Anything you can imagine, we already know how to do ... We now have the technology to take ET home."

**Ben Rich, the former CEO of Lockheed Skunkworks, Lecture in 1993**

"In this exhibit at Norton Air Force Base, a three star general said that these vehicles were capable of doing light speed or better.... as this system begins to tap into this zero-point energy and is drawing it away from the local environment, the whole craft becomes lighter in weight — it becomes partially mass-canceled, if you will, which is one of the reasons why just a little bit of energy in the capacitors could shoot it all over the place."

**Mark McCandlish, US Air Force**

"In my career I read a document in Washington that explained the US Scientist's understanding of [a device taken from a crashed UFO]: it was an energy device that uses "Zero Point Energy", and it was connected in such a manner that this device could power from a very small flashlight or very small watch up to an entire city. And the power was determined by what the demand on it was. And so each craft had one of these... I'm sure they did [implement this technology into other projects]"

**Richard Doty, Sp. Agent for Counter-Intelligence, Air Force Office of Special Investigations (AFOSI)**

"It's not that our government and the world doesn't want us to know that there are other people on other planets that have existed for thousands of years. What the people in power right now don't want us to know is that this free energy is available to everybody."

**Master Sergeant Dan Morris, USAF (Retired) / NRO Operative**

"Let there be no doubt. Alien technology harvested from the infamous saucer crash in Roswell, N.Mex., in July 1947 led directly to the development of the integrated circuit chip, laser and fiber optic technologies, Particle beams, Electromagnetic propulsion systems, Depleted uranium projectiles, Stealth capabilities, and many others! How do I know? I was in charge! I think the kids on this planet are wise to the truth, and I think we ought to give it to them. I think they deserve it... We gave information about the [reverse engineered] ET technologies out and insisted [US corporations] "take the patents, make all the money you want, but give it to the American people and give it to the world."

**Colonel Phillip J. Corso, Sr., US Army (ret.)**

"A lot of the things that are said in the book by Colonel Corso [**The Day After Roswell**], I can verify, corroborated by people that I have worked with and do work with now."

**Don Phillips, Lockheed Skunkworks, US Air Force and CIA Contractor**
